Ben,

Per our conversation just now, I'd like to know what, if any testing, has been done by the EPA or anyone else for radioactive contamination in areas near the West Lake landfill. If testing was done, when was it done? Was it done of groundwater or soil or both? What were the results of any such tests? Did any testing include the Bridgeton Municipal Athletic Complex?

Does the EPA have any comment on the material released today by the group Just Moms Stl regarding what it says is evidence of elevated radioactive-material levels at the athletic complex?

Does the EPA plan any future testing for radioactive contamination at the athletic complex or in other areas around the West Lake landfill?

Thanks and regards,

John
